PROFESSIONAL SUMMARY

Informatics engineering student specializing in Artificial Intelligence, with hands-on experience leading a 5-person team to build AURIX, an AI-powered tender management platform. Skilled in cross-platform mobile development with Flutter and Dart, and in integrating AI directly into product workflows — including retrieval-augmented generation (RAG) pipelines for verifying extracted document data. Comfortable working across the stack: front-end architecture, REST APIs, and coordinating cross-functional teams under Git/Jira workflows.

CORE COMPETENCIES

Flutter | Dart | Mobile App Development | Cross-Platform Development | iOS | Android | State Management | RESTful API Integration | Artificial Intelligence (AI) | Machine Learning | AI Integration | Retrieval-Augmented Generation (RAG) | Large Language Models (LLM) | Clean Architecture | Laravel | PHP | PostgreSQL | Firebase | SQL | Database Management | UI/UX Design | Figma | Wireframing | Prototyping | Git | GitHub | Jira | Agile | Team Leadership | Project Management | Data Entry | Data Verification | Data Analysis

PROFESSIONAL EXPERIENCE

Team Leader, Front-End & AI Developer — AURIX (Smart Tender Management System)

2026

Personal / Team Project

- Led and coordinated a 5-person development team through the full build of an AI-powered decision-support platform for tender evaluation, from architecture to delivery.
- Resolved early-stage data collection gaps by consulting with domain experts, including lawyers, to correctly define and validate the legal/contractual data the platform needed to process.
- Solved a client data-security constraint by replacing external AI API calls with a self-hosted internal AI model, keeping sensitive tender and client data in-house.
- Designed and implemented a Retrieval-Augmented Generation (RAG) pipeline connecting the AI model to the project's own database, so extracted document data could be cross-checked for accuracy before being surfaced to users.
- Structured the codebase using Clean Architecture principles and managed team workflow with Git and Jira, keeping front-end, back-end, and AI components decoupled and independently testable.

Flutter / Mobile Development Trainee

2026 – Present

Damascus Intermediate Institute – UNRWA

- Built responsive cross-platform mobile applications in Flutter and Dart through hands-on, project-based training rather than lecture-only coursework, applying state management and REST API integration to working apps.
- Worked within a small development team where recurring technical roadblocks were solved collaboratively — developed the habit of flagging blockers early and pairing with teammates to debug rather than working in isolation.

Data Entry & Field Data Verification Volunteer

1 Year

Community Development Committee – Ministry of Social Affairs and Labor

- Entered, reviewed, and verified an estimated 500–2,000 beneficiary records, maintaining accuracy across large-scale data collection campaigns.
- Acted as a coordination point between field data-collection teams and administrative staff to keep verification cycles on schedule.

UI/UX Design Trainee

2023 (3 Months)

Damascus Intermediate Institute – UNRWA

- Practiced user-centered design end-to-end — wireframing and interactive prototyping in Figma — through applied project work rather than theory alone.
- Translated design prototypes into front-end mobile implementation, working directly with development trainees to close the design-to-code gap.

OTHER PROJECTS

Bulk Messaging & Aid Distribution App

Flutter Mobile Application — Personal Project

- Built a Flutter mobile application for broadcasting bulk messaging communications to coordinate humanitarian aid distribution for Palestinian refugees, streamlining outreach to recipient groups.

Mafia Social Deduction Game

Flutter Mobile Game — Personal Project

- Recreated the social deduction game as a cross-platform Flutter mobile game, implementing multi-state game logic, state management, interactive UI flow, and animation.

EDUCATION

Bachelor of Informatics Engineering — AI Specialization

Expected Early 2027

Al-Sham Private University, Damascus, Syria

TECHNICAL SKILLS

- Mobile & Frontend Development: Flutter, Dart, Cross-Platform Mobile Development, State Management, Responsive UI Design, iOS and Android
- Backend & Databases: Laravel, PHP, PostgreSQL, Firebase, RESTful API Development, SQL, Database Management
- Artificial Intelligence: Retrieval-Augmented Generation (RAG), AI/Database Integration, Applied Machine Learning, AI-Assisted Development, Large Language Model (LLM) Integration
- Tools & Practices: Figma, UI/UX Design, Git, GitHub, Jira, Agile Methodology, Clean Architecture, Software Documentation

CERTIFICATIONS

- Claude 101 & Claude Code in Action — Anthropic
- Flutter Mobile App Development & UI/UX Design — UNRWA
- Programming Fundamentals — Programiz | ICDL — Edraak

LANGUAGES

Arabic: Native · English: Good Professional Working Proficiency
